Management

The only standard for IT asset management is that there is no standard. Most organisations support deployments that include a variety of devices including smartphones, netbooks, PCs and Macs with users who work from the office, home, on the road, and in transit. Let's face it – the standard has become whatever the user needs to perform their work efficiently and well.

If this is your reality, how do you manage it? For most IT administrators, this means towing the line between operating systems – flipping from one set of applications to another depending on the device, the desired action, and the user profile.

Absolute® Manage (formerly LANrev) can turn your existing pain into a set of simple, automated processes using technology that will allow you to manage PC or Mac devices from a single interface.

Intelligent

Track installed applications and licences, and redeploy under-used licenses to maximise your inventory and avoid non-compliance fines. Find, terminate, and remove unlicensed and unauthorised software.

Automated

Efficiently manage all of your assets by automating time-consuming IT processes such as software distribution, patch management, asset inventory and imaging.

Cross Platform

Enjoy ease of use and cross-platform capabilities using a single console to manage all PC and Mac devices in your deployment.

Application & Licence Management

Absolute Manage provides you with the tools to track and manage installed applications and licences on all the devices in your deployment:

Software Deployment

- Load balance and minimise bandwidth usage for large deployments with the distributed staging server architecture
- Detect missing applications and remotely install them
- Repackage software installations and deploy in PKG and DMG formats. Generate uninstallers for removal as required.
- Deploy software in native installer formats and control the installation conditions
- Easily install Adobe using built-in direct deployment support for Adobe CS 3/4 installers and patches

Licence Management

- Prevent the launch of applications that exceed licensing
- Monitor usage and redeploy under-used applications
- Find, terminate, and remove unlicensed and unauthorised software

Security, Change & Configuration Management

Monitor and enforce your configuration policies and use the data to:

- Filter and group systems and configurations based on OS and business function
- Remotely adjust system configurations
- Restart, shut down, or put remote computers to sleep
- Execute files or scripts

INTELLIGENT. AUTOMATED. CROSS PLATFORM.

Automated Patch Management

Don't rely on end-users to prevent viruses, worms, and other security threats from entering your network. Now you can centrally manage and install patches, tracking and reporting on the patch status of all managed systems. With Absolute Manage, after you do a basic OS install, all required updates and patches for the system will be automatically added.

Computer Imaging

Save countless hours by using a single automated process to install a complete operating system, plus all standard applications onto your Mac devices. You can even deploy a disk image to a computer while it's in use or NetBoot a computer directly out of the box. With Absolute Manage, you can automatically migrate user folders, network settings and Directory Access settings. Upon reboot, users will find a new operating system or clean image of the existing system with no interruption to their productivity. Future changes are simple to apply since you can easily edit the disk images you've created.

Power Management

Implementing an energy savings policy can improve your bottom line, but more importantly, your organisation can contribute to the global efforts underway to conserve and preserve the planet's resources. Use Absolute Manage to build a policy that is based on user behaviour and work schedules. Assign power saving profiles based on connectivity, day/time, or login status and build in defaults so the most energy efficient profile is enforced for maximum savings. You can analyse the data generated by your policy to determine your resource savings and to plan for greater efficiencies in the future.

Asset Inventory

- Gather hundreds of hardware and software data points from devices over the network
- Display data with custom views, searches, and reports
- Export data into various file formats
- Integrate asset information into third party applications such as Microsoft SCCM and Web Help Desk
- Gather serial numbers and installed applications for Apple iPhone and iPod touch devices

Enterprise Desktop Alliance

Absolute Software is proud to be a member of the Enterprise Desktop Alliance (EDA). The EDA is a group of companies that deliver solutions that streamline the deployment, integration and management of Mac and Windows devices within an existing Windows infrastructure.

System Requirements

Server

- Windows® 2000 SP4 or up†
- Mac® OS X 10.4 or up‡

Admin

- Windows® 2000 SP4 or up†
- Mac OS® X 10.4 or up‡

Client

- Windows® 2000 SP4 or up†
- Mac® OS X 10.3.9 or up‡
- Mac® OS X 10.2
(support is available via Agent version 4.0.4)
- Mac® OS X 10.3-10.3.8
(support is available via Agent version 4.5.x)

InstallEase for Mac

- Mac® OS X 10.4 or up‡
- Xcode® 2.4 or newer
(only for creating PKG installers and uninstallers)
- Iceberg® 1.2.2 or newer
(only for creating Iceberg projects)

† including Windows® 2008 Server & Windows 7®

‡ including Mac® OS X 10.6 Snow Leopard™
